AGANBEGYAN A.G., ACADEMICIAN OF THE RUSSIAN ACADEMY OF SCIENCES
[report at the IPN RAS Conference in June 2025 and commentary to the report – "We have created a vicious socio-economic system"]: https://dzen.ru/a/aHJ22KkrOByjp32Y

THE RESULTS OF THE MANAGEMENT OF THE COLONIAL ECONOMY OF RUSSIA IN THE PERIOD OF 34 YEARS FROM 1991 TO 2025.

I. FROM 1991 TO 2025, RUSSIA HAS BEEN DEVELOPING PURELY AS A RAW MATERIAL COLONIAL APPENDAGE OF THE UNITED STATES IN THE GLOBAL LIBERAL CAPITALIST MARKET ECONOMY

The United States, creating capitalism in Russia, destroyed in it, among other things, the planned conduct of the economy with a mandatory 5-year planning period; all high-tech and highly developed industries: aircraft construction; space industry, radio engineering; the element base of radio electronics; shipbuilding; machine tool manufacturing; bearing production; automotive industry; chemical industry; light industry; collective highly productive and profitable agriculture; fishing industry and fishing industry of the economy.

The original Russian system of primary and secondary school education, secondary special education, and higher education was destroyed.

Russia has been turned into a purely raw-material colonial appendage of the global liberal market economy. At the same time, the entire Russian fundamental and branch science was destroyed. High-quality preventive medicine, which served every citizen from birth to old age, was destroyed.

The system of annual mass rehabilitation of the population in sanatoriums, pioneer camps and health resorts.

The system of nursery and kindergarten provision for children was destroyed, the children's kitchen was destroyed, which sharply reduced the birth rate and led to a demographic failure. The national vaccination system has been disrupted. The system of free (paid for by the state) treatment of citizens and provision of citizens with all necessary medicines has been eliminated. Citizens were deprived of a full-fledged state insurance system.

II. THE UNITED STATES INTRODUCED GLOBAL "COLONIAL" RULE IN RUSSIA IN 1991

The United States has introduced a "global colonial rule": the metropolis is located on Capitol Hill in the United States and is governed by an American President, an analogue of "Emperor Napoleon I Bonaparte."

The main instrument of colonial policy is the US dollar of the US Federal Reserve, which has been given the status of the only single reserve currency in the world, which in the EU is called the "euro ECB" [global "colonial" banking rule].

According to this rule [the global "colonial" banking rule], no colony has the right to issue its own reserve currency. Only the US Federal Reserve has the right to issue a reserve currency.

The colony has the right to issue its own national currency only in the amount of the reserve currency of the US Federal Reserve available to it. This amount is either an investment from the metropolis, or the income of the colony from the sale to the metropolis of raw materials, goods and services necessary for the metropolis at colonial prices of the metropolis.

If a colony refuses to comply with both the "global colonial rule" and the "global colonial banking rule", then it is forced to do so by force, using, in particular, the political mechanism of the United Nations and the military mechanism of NATO.

In other words, all US colonies are required to settle accounts with each other either solely in their national currencies at the exchange rate against the dollar and the euro, or directly in the reserve currency of the US Federal Reserve (dollar) or the ECB (euro).

That is why today Russian rubles, Chinese yuan, Indian rupees, Brazilian Real, as well as all other national currencies of all other UN countries are purely "colonial" currencies of the US Federal Reserve?

The US Federal Reserve does fully regulate all issuance in all national currencies in all its colonies?

In this context, Russia's financial system is an incomplete colonial settlement system, which is of auxiliary importance exclusively in the context of servicing the metropolis in Washington [USA].

In Russia, the Anglo-Saxons built their own raw material colony. Through the "traitor" Gorbachev, who was "recruited in Great Britain" and through the "traitor" Yakovlev, who was "recruited in Canada", the entire socially oriented economy of the USSR was destroyed?

The USSR was artificially divided into "CIS countries" in 1991, and all these "CIS countries" have now become "free liberal global colonies of the United States with their national colonial currencies"?

On July 18, 2025, the 18th package of sanctions in the EU was introduced against Russia. https://vc.ru/money/2106750-22-banka-rossii-pod-sanktsiyami-es-2025-goda

As a result of the financial sanctions imposed by the US Federal Reserve, a systemic catastrophe of illiquidity and default in banks such as VTB and Sberbank is brewing in Russia.

This is directly related to the need to repay the ultra-expensive deposits attracted over the past year with the payment of ultra-high interest. This is 120-125 trillion rubles today.

The size of the National Welfare Fund of Russia on July 1, 2025 amounted to a meager 13.09058 trillion rubles, which is barely $^{1}/_{10}$ of the required amount. Therefore, there is simply nowhere to take these necessary 120-125 trillion rubles. There are none. They need to be created through the issue of Russia's own reserve currency. which Russia does not have today.

"Systemic banks are already experiencing a severe shortage of capital and have turned to the Central Bank for help" https://dzen.ru/a/aHnkx_XhqktOl-EM

"Many people believe that since banks are now making record profits, they cannot have any problems (last year it amounted to more than 3 trillion rubles, this year it will probably be less).

But this is a misconception: out of a profit of 3 trillion, it is impossible, for example, to return deposits of more than 100 trillion (jointly by individuals and legal entities) and pay them 20-25 trillion percent.

In addition, part of the profit has already been distributed to dividends, including by banks that may be among the most problematic, for example, VTB."

Today, Russia's leading systemic banks have appealed to the Central Bank of Russia with a "cry" for help.

They are already blocking the accounts of defrauded ordinary citizens due to loss of liquidity. "Scream and Howl" is online.

Realizing that there is no money, will people urgently start withdrawing their deposits from banks?

It is necessary today to form a unified preventive anti-crisis management structure for at least 28 systemic, obviously problematic banks in Russia.

The list of 12 banks that are already at risk of systemic default:

1). Sberbank PJSC;

2). VTB Bank (PJSC);

3). GPB Bank (JSC) (Gazprombank);

4). ALFA-BANK JSC;

5). PSB Bank PJSC;

6). Rosselkhoznadzor JSC;

7). PJSC Credit Bank of Moscow;

8). Sovcombank PJSC;

9). T-Bank JSC;

10). Raiffeisenbank JSC;

11). PJSC Bank FC Otkritie;

12). JSC UniCredit Bank.

A list of 16 banks that have already been sanctioned by the EU and are already experiencing rapidly increasing systemic liquidity problems:

1). T-Bank (formerly Tinkoff) is the largest fintech player;

2). Bank of Saint Petersburg — the main bank of the North-Western District;

3). Zenit Bank — Tatneft's structure;

4). The house. RF — mortgage bank with state participation;

5). Ozon Bank — serves the Ozon ecosystem;

6). Yandex Bank — the financial division of Yandex;

7). Bank 131 — B2B payments;

8). Surgutneftegazbank is the bank of the Surgutneftegaz Oil Group;

9). Metcombank — serves the metallurgical sector;

10). Severgazbank is controlled by Gazprom Neft;

11). Energotransbank is a regional leader in Kaliningrad's financial sector;

12). Transstroybank — bank of infrastructure projects;

13). SME Bank — responsible for supporting small businesses;

14). FINAM Bank is part of the FINAM investment group and broker, which allowed trading in foreign stocks (it was warned many times that it was better to use only foreign brokers to trade American foreign stocks);

15). Expobank — a private universal bank;

16). Rostfinance is a local bank in Rostov.

The moment is critical today. The "experts" from finance, all of whose recommendations are formed exclusively by American colonial artificial intelligence, are all telling lies.

Unfortunately, without Russia's own reserve currency, a default starting in September 2025 and continuing in 2026 is unlikely to be avoided?

Deflation has already started [60 Minutes TV program]? Is this the first alarm bell?

Will there be problems with financing the entire military-industrial complex? Is the economy of the Russian military-industrial complex today "frozen by colonial artificial intelligence from the United States" and "some financiers," figuratively speaking, who use it as a "prosthetic of their own brain" in view of the complete absence of their own?

Karen Shakhnazarov [TV program, Solovyov], believes that Russia's interests were "betrayed" by financiers with a "colonial prosthetic brain"?

III. RUSSIA IS TODAY A "STATE OF 120 OLIGARCHS"?

1). "The share of the oligarchy in Russia is one of the highest in the world: 650 billion dollars of assets are concentrated in the hands of only 120 people."

From 1991 to 2025, the country is managed by a team that consists mainly of these "irremovable" 120 "oligarchs", who are combined in different ways between by yourself, in order to maintain your political power?

2). Over the past 34 years, according to Rosstat, China's GDP has grown 13 times [1300%]; India – 8.6 times [860%]; developing countries - 3 to 6 times [300% to 600%]; post—socialist countries - 2.5 times [250%]; The United States has grown twofold [200%] during this time. Only in colonial Russia did economic growth amount to a minuscule amount – 1.37 times [137%]. The result of these "effective managers" speaks for itself. https://dzen.ru/a/aHJ22KkrOByjp32Y

The economy of colonial Russia has been stagnating in the same place for the past 34 years. Real GDP growth, according to Rosstat, is no more than 1% per year [137-100=37% over 34 years or ≈1% per year].

3). The average life expectancy in Russia is at the level of 1964 and is about 70 years old. Starting in 2028, women will retire at the age of 60, and men will retire at the age of 65. But de facto, will they be forced to work until their death due to the meager size of their pension?

In Russia, there is no minimum amount of income from which the state does not collect taxes on behalf of 120 "oligarchs". They take taxes even from the last beggar. From any amount of a beggar's income.

There is also no minimum amount of payments from the budget for each citizen from his birth, which would allow him to maintain his life activity at a minimum decent level in a life situation of any complexity.

The 120 "oligarchs" listed above have made the rest of Russia's population destitute.: Tens of millions of people, according to official government statistics alone [at least 20 million people], are listed as openly poor.

Every day, masses of children are shown on television, whose parents, being poor, cannot pay for their treatment themselves and ask these 120 "oligarchs" for help. For some reason, the Russian Orthodox Church does not provide any charitable assistance to these unfortunate people, and therefore they are forced to seek help through television?

4). Two thirds [2/3] of Russian enterprises are technologically outdated. A quarter [1/4] of the entire machine park operates beyond the depreciation period, which in Russia is one of the longest in the world.

5). Labor productivity in Russia is 4 times lower than in developed countries.

6). In terms of consumption of raw materials and electricity per unit of production, Russia has indicators 2-3 times higher than in developed countries.

7). The level of robotics is also significantly lagging behind the world leaders. There are only 19 robots per 10,000 employees in Russia, while in South Korea this figure is 1,014, and in other developed countries it ranges from 200 to 600.

8). The number of supercomputers in Russia is extremely small — only 7, while in China and the USA there are 150 each.

9). In 2021, Russia ranked 45th in the global innovation ranking, assessed by 80 indicators, including inventions, patents, education level, and R&D spending.

In 2025, the country dropped to 59th place and continues to fall even lower.

10). The development of innovative companies is difficult due to the lack of venture capital, the main source of their financing.

The volume of venture capital investments has decreased from $3.4 billion in 2021 to just $270 million in 2025, which is not enough even to create one "unicorn" [that is, a company with $1 billion in venture capital investments].

11). The US share in the global market of technological goods and services is 25% in volume and 39% in exports. Russia's share in the global market of technological goods and services is 1.3%, and in exports — 0.3%.

12). Developed countries have a high level of investment in the knowledge economy — 30% in Europe and 40% in the USA.

An analysis of the distribution of investments in fixed assets shows that economic growth is impossible if the share of investments in the knowledge economy is less than 25%. In Russia, this figure does not exceed 18%.

13). The experience of countries such as China, South Korea, and Japan suggests that economic recovery begins with a sharp increase in investment, growing by 10-15% per year.

But the de facto 120 ruling "oligarchs" of Russia refuse on principle to invest in Russia's economic recovery.

Having received their capital in the process of the highly controversial Russian model of "privatization", they did not invest a single penny in the creation of these assets, but made the rest of the Russian population poor?

Are they only interested in personal yachts and investments in the metropolis they work for? Do they behave like "colonialists" in Russia, and for them the Russian population is de facto, figuratively speaking, "slaves"? These "colonial oligarchs" usually live with their relatives in the metropolis.

14). For the resumption of socio-economic growth, a certain share of investments in fixed assets and human capital in the gross product is required. If investments are below a certain critical level, then sustained annual growth of 3-4% per year is really impossible.

The most difficult task is to stimulate sustainable economic growth. To do this, it is necessary to give an impetus to the economy, which is impossible with the current investment level of 5-7%.

It is impossible to create an economy of progress on the existing "outdated fleet of machine tools", but it is quite possible to make super profits without investing anything at all with the lowest labor productivity.

15). "The current socio-economic system in Russia is a colonial state-oligarchic capitalism with an incomplete market and a backward social model, without a developed capital market capable of providing large investment loans, including for education."

"A fundamental transformation of this system is needed, reform of property, the financial system and the banking sector, the restoration of long-term money and the creation of a full-fledged stock exchange."

"It also requires a fundamental change in the system of oligarchic management [of 120 permanent "oligarchs"], a transition to strategic five-year planning, tough at the initial stage and more flexible as it develops the market."

16). No progress in space exploration can be achieved under the existing colonial state-oligarchic capitalism in Russia named after 120 "oligarchs"?

The sooner this intermediate colonial stage of 120 "oligarchs" in the social development of Russia is passed, the better it will be for the people of Russia, unless the people of Russia are going to remain an eternal collective a slave to the 120 "oligarchs" who have been running its economy so "effectively" for 34 years continuously??

The BRICS countries do not want to be colonies of the United States. "The world has changed. We don't need an Emperor. We are sovereign countries," said Lula da Silva, President of Brazil, 25 July, 2025.

https://dzen.ru/a/aIOewzRQM05bzkg4

Therefore, the BRICS need to introduce their own reserve currency equivalent to the US Federal Reserve dollar, without affecting the US Federal Reserve dollar itself. This is exactly what has been proposed to do, starting with Russia.
